State Board of Education

At the beginning of FY 83, the members of the State Board of Education were Vince Casey of Anchorage, president; Thelma Langdon of Anchorage, vice president; Jan Hohman of Juneau secretary; Carol Schatz of Bethel; Jack Townshend of Fairbanks; and Alaire Stanton of Ketchikan. In August Patsy Aamodt of Barrow was appointed by Governor Hammond to replace June Nelson of Kotzebue, who resigned to run for a seat in the Legislature.

Col. Roger Strosnider was selected by the Board to serve as military representative, replacing Col. Alva Hayes. Leo Walsh of Anchorage West High School was selected student representative.

The Board was primarily involved in implementation efforts for the Alaska Effective Schooling Program, and conducted a nationwide search for a Commissioner of Education to succeed Marshall Lind, who retired after 12 years in that post.

After he took office in December, newly elected Governor Bill Sheffield asked for and received resignations from the entire Board and placed a moratorium on the major projects in which they were involved.

The Governor appointed seven new Board members: Ernestine Griffin of Sitka, who was elected president; Barney Gottstein of Anchorage, vice president; Mary Schaeffer of Kotzebue, secretary; Don Gray of Fairbanks; Sue Hull of Fairbanks; William Eubank of Sand Point; and Sam Kito of Anchorage. Col. Strosnider and Leo Walsh were asked to continue in their advisory positions.

On January 5, 1983, the newly appointed members took the oath of office and started evaluating the search process for a new commissioner. After modifying the original process and interviewing a number of candidates, the Board recommended appointment of Harold Raynolds Jr. of Maine as Commissioner of Education. Commissioner Raynolds assumed office May 9, 1983.

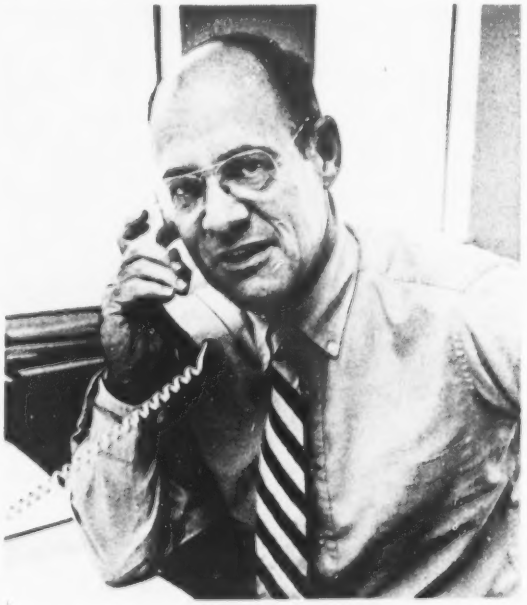
The Board has scheduled meetings in various parts of the state to provide for a wide range of public participation and comment. The Board has taken a strong leadership position in directing the Department of Education to proceed with the Education Finance Study, to implement various aspects of the ongoing Effective Schooling Program, to upgrade fiscal and facilities procedures in the school districts, and in solving many of the problems associated with the transfer of the BIA Day Schools and the Mt. Edgecumbe Boarding School to state control.

Executive Administration

The Executive Administration of the Department of Education underwent a major change in May with the retirement of former Commissioner of Education Marshall Lind and appointment of Commissioner of Education Harold Raynolds Jr.

In the first months of the new administration, a number of issues were named priority concerns:

- School finance, including a study of the Public School Foundation Program
- Rural secondary education, including negotiations with the federal government over the transfer of the Bureau of Indian Affairs Mt. Edgecumbe Boarding High School to state government
- School improvement, including continued support for the Alaska Effective Schooling Program
- Facilities construction costs
- Statewide education standards, including examining high school graduation requirements
- Vocational education, including coordinating program delivery efforts with other agencies
- Data collection



Harold Raynolds, Jr. assumed office as Commissioner of Education May 9, 1983.

Adult and Continuing Education

In coordination with the Alaska State Advisory Council on Career and Vocational Education, the Office of Adult and Continuing Education completed research and analysis of adult vocational technical centers in the state. Final recommendations regarding criteria for the establishment of new Vocational Technical Centers were forwarded to the State Board of Education in June 1983.

The adult vocational education program provided grant funds to Alaska Pacific University for vocational English as a Second Language instruction. This program provided on-the-job instruction in English for 87 housekeeping and food service employees in Anchorage hotels. Sitka Community College received grant funds to provide English as a Second Language instruction to employees of local seafood processing plants.

P.L. 94-482 grant funds were used to provide adult postsecondary training programs in computerized office occupations, oil spill response training, well control schools and child care aide training.

Kotzebue Technical Center opened its new facility in February of 1983 and offered training programs in six occupational areas. Enrollment increased to a high of 94 with the implementation of an aviation ground school program in spring 1983.

The Youth Employment Service provided employment placement or related services to approximately 9,000 youth through contracts with seven local Job Service offices. Recruitment efforts were coordinated with local educational institutions. The YES program also trained and placed 50 young people as HOSTs with the Alaska Railroad and a private tour company during the 1983 tourist season.

Two summer classroom training projects were funded under CETA Governor's Grant in FY83. A nationally validated Job Club to find jobs for 100 adults will be conducted by Cook Inlet Native Association in Anchorage. A specialized clerical and pre-accounting program using computers and word processing equipment will train CETA-eligible adults for the growing number of small businesses in the Kenai area. This program is operated by People Count, Inc., a private, nonprofit, training organization.

The office of Adult and Continuing Education monitored statewide adult corrections education for the Division of Corrections during FY83. Local programs were monitored to establish consistency and to develop a statewide student data base. Recommendations for program improvement were forwarded to the Division of Corrections and the Twelfth Legislature.

Adult Basic Education

In FY83 Alaska hosted a national adult education conference. Held in Anchorage May 9-13, "Discover the Future" was co-sponsored by the Adult Basic Education Commission of the USA, the Northwest Adult Education Association, and the Alaska Adult Education Association.

More than 500 participants registered for conference events and another 650 attended such special events as the learning disabilities program and a trip to the Alaska Vocational Technical Center at Seward. About 50 conference participants were adult educators from outside the United States.

Adult basic education was carried to a majority of Alaska's towns and villages despite a cut in legislative funding. Nearly 10,000 Alaskans participated in local programs to study basic literacy, computer literacy, consumer and survival skills, English as a Second Language, subjects to complete high school graduation requirements, and other topics of local, state, and national concern.

Community Education

FY83 saw a significant increase in Community Education activities. The program expanded from 38 to 45 school districts. Total participants numbered 329,000 and generated over 4.2 million contact hours.

Local community education activities ranged from sports to art to academics and also included a great deal of effort in community development.

Community education also completed criteria for seeking Promising Practices programs and piloted peer monitoring in five sites.

Marine and Natural Resources Education

The marine and natural resources education program worked with the Alaska Economics and Education Steering Committee as well as with the Department of Commerce and Economic Development to assist in identifying program and policy changes needed to incorporate economic development and opportunities into the educational programs of the state.

Part of that effort was devoted to assisting in the development of a mining and minerals curriculum

for fourth to sixth grade students.

Another major program activity was participation in the ocean project (TOP) of the Pacific Circle Consortium. This is an international curriculum project in fisheries and marine education for elementary and secondary grades. Goal of the project is to develop technological, scientific and humanistic studies of the Pacific Ocean area. The project involves a group of educational and research and curriculum development organizations from Australia, Canada, Japan, New Zealand, and the United States.

Alaska's instructional television project on fisheries will be used as a resource for this project.

Fire Service Training

Quarterly week-long courses in basic firefighting were provided to 143 Firefighter I candidates and 110 village public safety officers at the Anchorage and Juneau Regional Fire Training Centers. Seventeen students completed 160 hours of course requirements during the year and graduated with Firefighter I certification in May.

Itinerant instructors, paid or volunteer firefighters who have been certified as instructors by the State, visited 13 communities from Kake to Northway to provide on-site training at the request of local fire departments. Local firefighters who could not leave their communities because of full-time jobs and other commitments received training in this manner.

Instructor certification testing continued, with 167 individuals tested during the year. Some 198 others are partially certified and continue their efforts toward full certification at the various levels.

Two National Fire Academy courses were sponsored by the Fire Service Training Program through weekend seminars.

Alaska Vocational Technical Center

The Alaska Vocational Technical Center at Seward provided training to approximately 1,000 adults in 15 occupational areas in FY83. New programs were developed for fisheries and inland marine boat operator's licensing. As a result of the boat operator's course, 200 Alaskans received U.S. Coast Guard licensing.

The Center participated in the Statewide Petroleum Extension Program by helping provide roustabout training.

In addition the Center added a bakery and provided numerous short-term training programs for emergency medical technician certification and rural school cooks.

The Alaska Vocational Technical Center added a nautical training department that offers courses in nautical and fisheries training.

A high point of the year was addition of a new nautical training department. Housed in a 2,900-square-foot addition to the center's First Lake Building, the new program offers a wide variety of vocational courses in nautical and fisheries training.

Personnel

The personnel section will be focusing their attention on the area of training during the coming fiscal year. Several in-house training courses concerning personnel management are being developed and will be presented by the staff.

Division of Educational Program Support

Office of Supplemental Programs

Passage of the federal Education Consolidation and Improvement Act (ECIA) in August 1981 (Public Law 97-35) changed the way a number of federally funded programs are administered.

Chapter 1 of ECIA provided programs for educationally deprived students in areas that are economically disadvantaged. Alaska's entitlement of $5,375,589 in FY83 provided for programs such as tutoring and small group work in basic skills.

Federal migrant education funds continued to provide special help for Alaska children who had moved because their parents were seasonally employed. An additional eight districts used the program this year, so approximately $235,000 was distributed to 15 districts. FY84 will yield approximately $318,000, an increase of $84,000.

ECIA Chapter 2 consolidated 29 formerly separate programs into a single block grant entitlement for each state. Like a number of other states with small populations, Alaska received a base allocation of $2,187,360 in FY83.

In preparation for administration of the funds, the department helped establish a 13-member state advisory committee, prepared a state plan for distribution of the funds, and scheduled a monitoring program that will cover all school districts on a two-year cycle.

Under Chapter 1 of Public Law 89-313 and Title VI-B of Public Law 94-142 more than $3 million of federal funds was channeled to Alaska school districts to provide supplemental services to handicapped students.

A major effort went toward establishing a process for conducting on-site monitoring of school district programs. All federal grants and state categorical programs would be monitored under the program.

Office for Exceptional Children

New regulations for handicapped and gifted and talented students were adopted by the State Board of Education, to become effective in FY84. During the year, 12,000 handicapped children were served, an increase of 1,059 over last year. Gifted and talented students increased to about 5,000.

A new publication, *Focus on Excellence*, was distributed to school districts. A joint effort of the State Board of Education and the Governor's Council on Handicapped and Gifted, the publication will help districts identify gifted students and develop appropriate educational programs for them.

The Department continued to work with school districts to promote freedom from sex bias and stereotyping in education.

The Department of Education awarded a contract to Alaska Resources for the Moderately /Severely Impaired to deliver services to Alaska's low incidence handicapped students. National interest has been focused on this delivery system as a model project.

Office of Career and Vocational Education

A reemphasis by the State Board of Education on vocational education allowed the Office of Career and Vocational Education to become fully staffed for the first time since 1978. The commitments made in the Five Year Plan approved by the State Board were addressed through joint

efforts of the department and the vocational education planning and advisory councils.

An Alaska Plan for Career and Vocational education was developed and presented to the board. Seven major goal statements were approved, and objectives have been developed which will be directed toward program improvement during the 1983-84 school year.

During FY83 52 grants totalling $720,000 in federal funds were issued to school districts, postsecondary programs and private non-profit organizations. The department continued financial support for expanded vocational training of more than 1,400 secondary students through two statewide programs, the Rural Student Vocational Program and the five statewide vocational student leadership organizations.

Office of School Improvement

Effective Schooling

The Office of School Improvement took primary responsibility for the Alaska Effective Schooling effort in FY83. Focus of the effort was to improve the quality of schooling in Alaska by making improvements in leadership, curriculum, school environment, quality of classroom management and instruction, and assessment and evaluation of school programs.

During 1982-83 Alaska Gateway, Anchorage and Matanuska-Susitna school districts tested leadership training materials and a training design developed under contract by the Northwest Regional Educational Laboratory.

The nine days of training provided guidance for teams from six schools to develop and implement a school improvement process. A second pilot will be conducted in rural sites during 1983-84.

Other activities under the Effective Schooling effort included review of state regulations on staff evaluation, revision of the Elementary Curriculum Framework, review of current graduation requirements, and support for Northwest Accreditation Association efforts to incorporate effective schooling practices. Other activities included identifying methods to address training needs for principals in the area of instructional leadership, and expanding areas for topical research. This ongoing, developmental effort is expected to have a major impact on activities for the 1983-84 school year.

Alaska State Writing Consortium

The 13 member districts of the Alaska State Writing Consortium sent representatives to three meetings during the school year.

This group reported on dozens of district inservice workshops and training sessions, and planned future direction for the consortium. Members also created committees to work on a variety of projects including production of a videotape series on teaching writing. Other projects include writing a position paper tying the writing project to Effective Schooling efforts and development of classroom based research projects.

In cooperation with the Alaska Department of Education and the University of Alaska—Fairbanks, the consortium sponsored the third annual summer institutes, which were attended by 90 select teachers who will return to train other teachers in their own school districts.

Division of Education Design and Delivery

Public Information

The public information unit sponsored the Third Annual School Communications and Public Relations Conference in March, 1983, attracting many educators from both Alaska and other Northwest states. This year, for the first time, the conference was conducted in cooperation with the Alaska School Public Relations Association.

The unit also produced the *Alaska Guide to School Communications and Public Relations*, a 230-page, three-ring binder publication featuring tips on school public relations theory, exemplary communications practices and more. The guide will be distributed during the 1983-84 school year.

The unit received six awards from the National Association of State Education Department Information Officers for communications projects and publications developed during the past fiscal year.

LearnAlaska networks link more than 200 Alaska communities with instructional television programs and audioconferencing capabilities.

Office of Planning and Research

The Office of Planning and Research coordinated testing of more than 13,000 fourth and eighth grade students this year in the state's fourth Biennial Assessment.

Designed to measure students' attainment of important mathematics and reading skills, the assessment provides valuable information to help school personnel identify strengths and weaknesses in the instructional process.

As part of department-wide school improvement efforts, the unit participated in the Effective Schooling pilot training project conducted in six schools. A major effort was undertaken to evaluate the outcomes of the training.

Research papers were produced dealing with the importance of matching school curriculum with other resources; teaching practices that relate to improving students' problem solving skills; case studies of three exemplary rural schools; and characteristics of effective teaching in rural Alaska.

During FY83 the office continued to plan for its in-depth study of Alaska's school finance system. The study will include a cost of education index which will reflect cost variations in providing educational services in Alaska. The study also will acquire data necessary to run a resource cost model computer simulation. The model will include enrollments and resources for programs in the schools.

A preliminary report is due in December 1983 with the final report due in December 1984.

Office of Educational Technology and Telecommunications

The microcomputer, the television and audio-teleconferencing have become learning lifelines in both urban and isolated classrooms in Alaska. To strengthen and support these lifelines, the Office of Educational Technology and Telecommunications (OET&T) helps plan, develop, and implement educational technology in public education.

The unit deals with many aspects of using microcomputers, audioconferencing and instructional television for education in the state. The unit also conducts research projects related to these and other technologies.

Educational Computing

During FY83 the unit published and distributed an educational computing newsletter. It also designed and developed: the *Alaska Manual for Educational Computing*, an eight-module Computer Literacy Training Series package for teachers;

Algebra I computer assisted instruction supplemental courseware; and *Administrative Planning for Microcomputers in Education*, computer training materials for building administrators.

More than 135 sites in 35 school districts report the use of one or more of the unit's eight Individualized Study by Technology (IST) courses. During the year, the unit revised two IST courses, Alaska history and English, for distribution in the fall of 1983.

Public school teachers in more than half of Alaska's school districts have received inservice training in educational computing through OET&T. A statewide system has been started to provide software evaluations from the Educational Products Information Exchange (EPIE) and the Northwest Regional Educational Laboratory Microsift project.

Large software packages acquired by the Department of Education from such outlets as Minnesota Educational Computing Consortium provide classroom courseware for use on more than 1,700 computers in Alaska public schools.

LearnAlaska Networks

Since the passage of legislation in 1980 creating the LearnAlaska network, OET&T has worked with the University of Alaska and the State Department of Administration to develop and manage two communication networks, one for instructional television and one for audioconferencing. The instructional television network is carried statewide by Alaska's communication satellite *Aurora*. Using minitransmitters and cable systems, the network carries 18 hours per day of instructional programming for kindergarten through 12th grade and other audiences. University of Alaska staff selected programming for postsecondary students. The department sponsored 150 series consisting of more than 3,000 programs, and teacher guides for these programs were distributed to educators throughout the state.

The Office of Educational Technology contracted for production of a number of instructional television series. These included series on Alaska geography, fisheries education, and Alaska history. Programs under development at fiscal year's end dealt with topics such as the Future Problem Solving Program, the Inua exhibit of Eskimo artifacts from the Smithsonian Institution, and the history of telecommunications in Alaska. The latter programs were developed in cooperation with other public agencies and major industries in the state.

The other LearnAlaska audioconferencing network links sites in more than 200 Alaska communities at no cost to educators. During the 1982-83 school year the network was used for more than 10,000 hours, bringing together groups of people from around the state for such activities as planning sessions, committee meetings, training workshops, and class discussions.

Department staff helped the state's schools develop use of microcomputers for teaching and school management.

One teleconference that originated from North Slope Borough School District demonstrated use of one-way video and two-way audio for classroom instruction. Another conference initiated in Fairbanks allowed students from eight different schools to talk with a space shuttle astronaut.

The Office of Educational Technology and Telecommunications conducted two special studies funded by the legislature, one on computer networking and one on computer literacy. Also, the office awarded a contract for a technology futures project intended to provide a model for making decisions about future investments in educational technology and to develop a five-year plan for technology and telecommunications development in public education.

Alaska Historical Commission

The major in-house project for the Alaska Historical Commission has been completion of an Alaska history textbook for secondary school students. A pilot edition, *Alaska's Past: Regional Perspectives*, was printed during the past year and evaluated in 17 classrooms statewide. Copies for review and comment also were sent to school districts, libraries, historical societies, and interested groups and individuals. The pilot edition was organized regionally and included units on Interior, Northwest and Arctic, Southeast, Southcentral, and Southwest Alaska plus an introductory unit. Revisions are being made and the first edition should be published by the fall of 1984.

In other major commission activity, grant applications were solicited throughout the state for projects that will contribute to greater understanding of Alaska history or improve access to Alaska history materials. During the past year commission members evaluated 92 grant applications and selected 40 for funding. Of those funded, 30 were research grants, eight were publication grants, and two were training grants. Recipients included individuals, organizations such as local historical societies and Native organizations, local governments, and universities.

During the summer of 1982 the Division of Legislative Audit completed a performance audit of the commission. The recommendations resulting from the audit were that the commission statutes should be clarified with respect to grant-making authority and that a catalog of commission publications and projects should be issued. A catalog has been prepared and circulated.

Professional Teaching Practices Commission

The Professional Teaching Practices Commission, comprised of nine members appointed by the Governor for three-year terms, oversees educator conduct in the State of Alaska and makes recommendations regarding certification and other issues, as provided in AS 14.370-510. PTPC's activities continued at a high rate for FY83.

Sixteen new cases were filed in FY83, 11 were closed, and nine were still pending at fiscal year's end. Thirty-four contacts also were received regarding potential formal complaints. Of these, five were filed as formal written complaints.

The commission recommended several regulations for possible promulgation by the Department of Education. They were 4 AAC 12.095(a) which would require the surrender of a revoked or suspended certificate within 30 days of notice of revocation or suspension; 4AAC 12.095(b) which would require that the department transmit notice of certificate revocation or suspension to all state departments of education; and 4 AAC 12.010(i) which would provide that failure to disclose revocation or suspension of certification in Alaska or another state would be the basis for denial or revocation of a certificate. The PTPC also published notice of 20 AAC 10.020(e)(9) which would bar sexual or other harassment of fellow employees.

The commission's executive secretary participated in school law workshops involving school districts, a women's resource group, the school counselors' conference; surveyed educators regarding a possible school law conference; and was appointed as the FY84 Alaska State co-chairperson for the National Organization on Legal Problems in Education.

In a continuing effort to better serve its constituent groups, the commission continued its publication of the *PTPC Handbook for Alaska Educators*, a Code of Ethics brochure, a newsletter entitled *Your Profession*, and a PTPC informational pamphlet. It also authorized the purchase of a word processing system to better facilitate and expedite the flow of clerical work.

The PTPC also authorized the publication and distribution of distinguished service awards for past PTPC members and selected others who had given generously of their time and talents for the betterment of the commission and education in the State of Alaska.

Centralized Correspondence Study

Centralized Correspondence Study (CC/S) was declared one of the nation's exemplary education programs by the U.S. Department of Education during FY83. It was the first time an Alaskan school has received national validation since the federal government started seeking exemplary programs in 1972.

As a result CC/S will be included among model programs in the National Diffusion Network, an information clearing house used by many of the nation's educators. A description of the program will appear in federal publications and an electronic networking system, and funds will be available to share the program with interested educators.

Centralized Correspondence Study provides free

public education for students who live in remote areas, whose families are traveling, and whose parents prefer to teach them at home. The program also helps adults complete high school or prepare for GED tests.

During 1982-83, 1,150 Alaskans were enrolled in the program, an all-time high.

Last year CC/S students participated in the Alaska Statewide Assessment of fourth and eighth graders and the California Achievement Test. In both cases the program's students scored significantly above state and national averages.

Tenth grade courses were written in newswriting, composition, civics, pre-algebra I and II and Western civilization I and II. Earth science I and II and health science I and II also were produced.

A long-term CC/S goal has been to produce basic secondary courses specifically for Alaska correspondence students.

CC/S-produced curriculum is now used in grades kindergarten through eight and for core subjects in grades 9 and 10. These courses are also made available to school districts on a cost-recovery basis.

The student activities program was expanded during the 1982-83 school year. A CC/S student government constitution was drafted and if it is adopted during FY84, student officers will be elected and a contest held to determine school colors and a mascot.

Application was made to the National Honor Society to obtain junior and senior high chapters.

Alaska State Council on the Arts

The Alaska State Council on the Arts, with an overall FY83 budget of $5.6 million, reviewed more than 600 applications submitted to its 11 grants programs throughout the year. The more than 260 grants that were awarded ranged from $1 million in operating support for the Alaska Repertory Theatre to workshop and travel grants of less than $400 each. More than $140,000 was made available to schools throughout Alaska for short term artist's residencies. State funds were matched with local dollars, and the program was managed for the State Arts Council by Arts Alaska, Inc., a not for profit arts organization.

The Council administered a number of programs in addition to the grants program: a catalogue and exhibit on Eskimo Dolls were produced; more than 50 works were acquired by the Alaska Contemporary Art Bank; and Council staff provided technical assistance for the percent for art program to a number of state agencies, the University of Alaska and rural school districts.

Alaska School Activities Association

During the 1982-83 school year the Alaska School Activities Association continued to promote student activities as the catalyst of education in Alaska. Students involved in a wide variety of activities proved to be ambassadors of good will from one Alaska community to another.

The first combined boys and girls state basketball tournament for small schools was conducted successfully and details of a new classification plan for the 1983-84 school year were worked out. Programs through the association's 184 member schools include athletics, music, forensics, vocations, government and leisure time activities.

An apprenticeship for Tony Umugak with master storyteller Joe Friday in Chevak was funded through a grant from the Alaska State Council on the Arts.

Division of Management, Law and Finance

During FY83, many activities in the Division of Management, Law and Finance focused on funding for the Public School Foundation Program, School Debt Retirement Program, audits and accountability of school districts, and the transfer of Bureau of Indian Affairs schools to the State of Alaska.

The Public School Foundation Program, which provides state funds to 53 school districts for much of their annual operating costs, was underfunded in FY83. Increased enrollments of nearly 4,000 students in city school districts and another 1,090 students from transferred BIA schools accounted for about two-thirds of the additional funds needed. New schools, a new school district, and program changes accounted for the balance.

The first act passed into law in the 1983 legislative session was a supplemental appropriation of $17,640,700 to cover the underfunding. Another $7,901,600 was transferred from the governor's federal budget FY83 impact fund.

Changes in the School Debt Retirement Program in 1982 led to passage of many new school bonds by municipalities during 1982-83. This created a need for state support, as provided in law, of twice the FY83 appropriation.

Division activities centered upon collecting and refining all available information to assess the full impact of this situation on state aid. This led the State Board of Education to adopt an emergency regulation that prevents municipalities from restructuring school bond debts over shorter repayment periods thereby creating greater demands on the state treasury. Several bills were introduced into the Legislature in an effort to provide a more structured review and approval process that would allow more accurate forecasting of impacts upon state support.

During the year, legislative auditors found many pupil accounting discrepancies in nine of 11 school districts. This led to conclusions that more than $1 million of state aid was overpaid during school year 1980-81. In addition, a new State Board of Education raised many questions about year-end fund balances of school districts, including questions of what might be done to assure better accounting for public funds. Efforts to improve regulations and department activities were continuing on these concerns as the fiscal year closed.

A cooperative agreement made with the Bureau of Indian Affairs will correct many life and safety code deficiencies in 17 BIA schools transferred to the state in 1982. Congress appropriated $11.1 million for these upgrades, and an additional $9.35 million appropriation was later made for the same purpose as additional BIA schools are transferred to the state.

During FY83 the facilities section underwent several changes. The Legislature transferred the school construction grant management program from the Department of Transportation and Public Facilities to the Department of Education. Though the Department of Education was actively involved in construction grant management in the past, this was the first year that the department directed all the responsibilities associated with the program. This new role involved department staff in preparing the annual capital budget request, a prioritized list of capital requests totaling over $500 million.

In FY83 the facility section set up 48 new construction grants totaling $31.8 million.

Teacher Certification

The teacher education and certification unit issued more than 4,000 certificates for educators in FY83. This reflects an increase in initial applicants of approximately 1,000 from last year. Microfilm, microimage, and computer equipment was installed to handle certification records.

The unit coordinated eight reviews of teacher education programs at institutions of higher learning during the year. In addition, members of the Teacher Education On-site Review Team held a session to discuss priorities for the future.

Pupil Transportation

Some 37,517 pupils were transported twice daily in 580 school buses at public expense during FY83. That travel covered almost 7 million route miles, according to figures compiled by the pupil tranportation unit. The unit also was instrumental in gaining approval of contracts to provide pupil transportation services in 12 school districts.

Management and Financial Services

The management and financial services unit administered more than $400 million in state Public School Foundation Program funds, and it provided statistical and other services to school districts. The unit also shared responsibility with the Division of Educational Program Support for the

development of a plan to implement federal audit requirements for local school districts.

The section managed the move and consolidation of Department of Education offices from several locations in Juneau to the Goldbelt Building, 801 W. Tenth Street in Juneau. The planning, organization, physical move and followup activities took about six months.

The unit also upgraded the department computer system and directed the installation of 20 workstations on the department-wide word processing system.

School Food Services

The School Food Service program distributed more than $7 million in federal funds to Alaska schools participating in federal school lunch, breakfast, and day care programs. Workshops, in-service training and curriculum materials were also provided at school district request on such topics as nutrition, sanitation and managerial techniques.

Division of Vocational Rehabilitation

Of approximately 3400 Alaskans with disabilities served by the division of Vocational Rehabilitation, 440 were placed in some form of employment during FY83. As a result of services provided by the division, these working people will return to society about nine dollars for every dollar spent by the agency on all clients whose cases were closed during FY83.

A major new initiative for the division during FY83 was a cooperative project with the special education and vocational education units of the Department of Education. The project funded a pilot program to expand existing vocational evaluation services for special education students in Anchorage, Kenai, Juneau, Kodiak and Fairbanks. By combining the expertise of the three agencies, the program should significantly help in developing realistic vocational goals for the special education students, and in establishing training aimed at achieving these goals.

Evaluators from the division traveled to the project school districts to perform vocational evaluations. Based on the evaluations, school district special education and vocational education personnel, and the communities' vocational rehabilitation counselors were to develop individual vocational programs for each student.

The division also awarded a number of grants to establish new services for disabled persons. Among them were a $40,000 grant to the Anchorage Mental Health Center and a $22,900 grant to the Aleutian Pribilof Mental Health Center. The Anchorage Community Mental Health Center grant was to cover start-up costs for a sheltered component to deliver work adjustment services to mentally disabled clients. The aim of this grant was to help alleviate the lack of vocational services for Alaska's mentally disabled.

The grant to the Aleutian Pribilof Mental Health Center was to provide for establishment of outreach rehabilitation services for disabled residents of the Aleutian Chain and the Pribilof Islands. This grant responded to concerns expressed by Governor Sheffield's transition team about a lack of rehabilitation services for rural Alaskans.

Division of Libraries and Museums

Alaska State Library

Statewide Media Booking

The statewide media booking system advanced from planning to implementation with the installation of a computer at the State Library's Anchorage site during 1983. The booking system allows the State Library to electronically administer a voluminous library of many types of media, including books and videotapes.

Installation of the computer followed joint planning by four initial participants: the Alaska State Library, Anchorage School District, and the Fairbanks and Anchorage campuses of the University of Alaska. Anchorage Municipal Libraries also participated in the design discussions.

Since installation of the computer, peripheral equipment has been installed at each site. Data conversion from Washington Library Network bibliographic tapes has been completed, staff at each site has received initial training on the first level of software, and additional data is currently being entered into the system.

Anchorage School District, both film centers of the Alaska State Libray and the University of Alaska—Anchorage are on line. Plans call for dial-up access to the media booking system to be made available to schools and libraries in November 1983.

As work progresses on the media booking system, planning continues for making the additional software available. This includes software for circulation control of books, serials and magazine management, and online card catalogs. All software will be made available to the libraries of Alaska as a cooperative project of the Alaska Library Network.

Also, the State Film Library has expanded its video dubbing capabilities to support ½-inch VHS and ½-inch Beta videotape service in addition to the ¾-inch service previously offered.

Library Services to Blind and Physically Handicapped

The Library for the Blind and Physically Handicapped provided more than 450 readers with cassettes and talking books. Collections from the library's specialized materials are placed in 50 locations around the state. Service to institutions continues with grants to local public libraries to work with correctional facilities, pioneer homes and other specialized institutions in their area.

The *Inua* exhibit of Bering Sea Eskimo artifacts attracted 17,000 people to the State Museum. A smaller exhibit traveled to five other parts of the state.

Library Grant Program

Sixty-eight public libraries with 79 outlets received basic library assistance grants of $5,000 to $10,000 each through the Library Grant Program. Regional library service is now provided through Anchorage Municipal Library, Fairbanks North Star Borough Library, and Juneau Borough Library.

Collection Development

Cooperative development of library collections also was encouraged. As a result of the Alaska Library Network microfiche catalog distribution, libraries in Alaska are increasingly aware of the holdings of other libraries throughout the state. In order to further increase awareness, an Interlibrary Cooperation Grant was awarded to the University of Alaska—Fairbanks for initiating and developing a statewide collection development program. Such programs are becoming commonplace among academic libraries, but Alaska is one of only two states pursuing a program involving academic, public and school libraries in order to access the library collections of the state.

Progress accomplished on this project during the year included assessment of collections of the Alaska State Library, University of Alaska—Anchorage, University of Alaska—Fairbanks, University of Alaska—Juneau, Ketchikan Community College, Matanuska-Susitna Community College, Anchorage Municipal Library, Fairbanks North Star Borough Library and Juneau Memorial Library.

In a workshop held in Anchorage in May representatives from these libraries trained 16 new participants from other Alaska public, community

college and school libraries in the methods used to access collections. Individual library assessment results are being compiled by microcomputer.

Telefacsimile

An innovative Library Cooperation Grant went to the University of Alaska—Anchorage for coordinating a trial telefacsimile project among Alaska libraries and the Resource Sharing Program at the University of Washington Library for rapid document delivery.

"Rapicom 3300" telefacsimile machines were installed at the Alaska State Library, the University of Alaska—Anchorage library and the University of Alaska—Fairbanks library; a "Rapicom 6200" was installed at the University of Washington Library.

Interlibrary loan requests for materials from any of these libraries were transmitted via telefax, arriving immediately at the designated library.

Interlibrary loan requests for materials from any of these libraries were transmitted via telefax, arriving immediately at the designated library. When requests were received for journal articles, articles were located, photocopied and sent to the requesting libraries via telefax within 24 hours. Rush requests were returned as quickly as possible, usually within a few hours. As the result of a six month trial period, all locations chose to continue the service during FY84.

Newspaper Indexing

Daily newspapers in Juneau, Anchorage and Fairbanks, and the weekly *Tundra Times* are now being indexed through a cooperative effort of librarians in various cities. Training has just been completed for indexing the *Nome Nugget*.

Legislative Current Awareness

For several years the Alaska State Library has provided a Current Awareness Service to Legislative committee chairmen during the legislative session. About twice a month the service sends the lawmakers packets containing tables of contents from selected current periodicals. This year in response to interest from other legislators, the service was expanded to serve all legislators. It had a dramatic impact. In 1982, 10 packets were produced for each of 22 recipients, and 430 articles were requested. In 1983, seven packets were produced for 62 recipients, and 2,600 articles were requested. The vastly expanded service involved distribution of more than 12,700 photocopied pages.

Washington Library Network

Alaska State Library has been a member of the Washington Library Network since 1977. The state library microfiche catalog and the Alaska Library Network catalog are produced directly from this database. This year a terminal in the reference area of the library allowed staff to immediately answer questions from the public about materials and holdings available through interlibrary loan. This capability further expands the database searching services of the State Library.

Alaska State Museum

The Alaska State Museum is a showcase for Alaska's people and culture. The museum preserves and interprets the state's human and natural history, and it coordinates and assists in the development of museums and related agencies statewide. More than 115,000 people visited the museum during 1983. Statewide outreach programs served an additional 120,000 Alaskans in FY83.

Inua exhibit

The major event of the year, *Inua: Spirit World of the Bering Sea Eskimo*, attracted in excess of 17,000 people to the museum within five weeks. More than 300 nineteenth century Eskimo artifacts from the Smithsonian Institution's Nelson Collection were exhibited in this traveling show. The show required special installation, and the museum provided trained volunteer guides to interpret it.

Based on the conviction that the collection should be seen in villages where many of the artifacts originated, the museum developed and built a smaller exhibit of 122 Nelson Collection artifacts to travel to five Eskimo areas in Alaska. Elders from the villages came to Juneau to help the museum education staff develop multi-media, bilingual materials to interpret the smaller show. Ten village young people also came to Juneau to learn how to present the show to their home communities.

This kind of cooperation among local museums, schools, elders and young people was an innovative and promising approach to museum interpretation.

Collections and Acquisitions

The State Museum continued to expand its collection in FY83, purchasing or receiving as donations 421 objects valued at $177,000. These included Alaska works by nationally recognized artists Rockwell Kent, Brett Weston, Claire Fejes, Rie Muñoz, and Nathan Jackson. Ethnographic

pieces acquired included an outstanding Haida grease dish and some Athapaskan and Aleut material. Monitoring the national market in Alaska cultural materials led to a number of these purchases.

One outstanding donation representing Alaska's mining history was a large nugget necklace with "TANANA" in gold letters and a gold pick and shovel.

Visual Arts and Permanent Exhibits

The museum visual arts program circulated touring exhibits to 20 communities, allowing residents living in communities without gallery space to see and appreciate Alaska art and culture. The visual arts program also coordinated a cooperative effort among six organizations and the state's museums to bring to Alaska six high security national exhibits. In addition, 17 other temporary exhibitions, Alaskan or Alaskan-organized, were shown.

Improvements to permanent exhibits included natural history exhibits, a uniform lighting system, renovation of a gallery section to provide more exhibit space, a new children's area and an audio system in the community house exhibit.

Education

The museum education section circulated 61 multi-media education kits to 250 schools statewide, serving 45,000 students. The staff is producing an inservice teacher training kit and a statewide workshop in kits with local themes. They also conducted voluteer and docent training and the annual folk festival.

Conservation

As part of conservation, staff members treated 314 objects in the state's collection and created new storage for the fine arts collection. Cooperative projects to preserve other aspects of Alaska's heritage were carried out with the U.S. Forest Service, Sealaska Heritage Foundation and the Sitka Pioneer Home.

In November and December a furnace malfunction necessitated emergency action and planning for a major cleaning of the collection. This also detained in-house exhibit projects and collections management pending examination of all surfaces for soot deposits.

Field Services

State Museum field services expanded publications to provide technical information to Alaska's museum community of staff, boards, volunteers and related agencies. In cooperation with the University of Alaska Museum and Museums Alaska, the statewide museum association, the State Museum coordinated the second Alaska Museum Institute, a statewide, weeklong museum management training session.

Fifty-two Grants-in-Aid to Alaska's museums helped increase small museums' capabilities to preserve Alaska's heritage through preservation and education projects. A new departmentally approved training program, Museum Studies Internship, enrolled two interns, one each in education and conservation.

The Alaska State Board of Education appointed Poldine Carlo of Fairbanks to serve on the Alaska State Museum Collections Advisory Committee. An Anthapaskan artist, Mrs. Carlo will fill a three year term on the State Museum's advisory committee. Continuing members are: Pat Oakes, Central, committee chair; Patrick Anderson, Anchorage; Dr. James E. Dixon, Fairbanks; Marian Johnson, Kodiak.

Friends of the Alaska State Museum, a subsidiary membership organization, sponsored a special exhibit, *Historical Paintings and Watercolors from the Permanent Collection*. The friends opened a museum gift shop June 1 and donated a Rie Muñoz tapestry entitled "Northern Lights" to the museum.

Commission on Postsecondary Education

The Alaska Commission on Postsecondary Education is charged with advising the governor and the legislature on matters related to higher education in Alaska.

Ongoing activities include administration of the state's student loan program, the state educational incentive grant program, and the Western Interstate Commission for Higher Education (WICHE) student exchange program.

Other responsibilities include regulation of postsecondary institutions in Alaska and approval of educational programs for veterans. The commission also serves as a consumer protection agency for postsecondary education services in Alaska.

Annual publications include the *Alaska High School Senior Survey Report, Directory of Postsecondary Educational Institutions in Alaska, Review of the University of Alaska Budget,* and the *Alaska Transfer Guide.*

In FY83, the commission completed one major study and began another. *Postsecondary Certificates and Degrees in the State of Alaska,* published in February and scheduled to be updated annually, identifies programs offered at public and private non-proprietary postsecondary institutions in Alaska (the University of Alaska system, Alaska Pacific University, Alaska Bible College, and Sheldon Jackson College).

Currently underway is an inventory and space utilization study of all University of Alaska facilities. The study will provide the Legislature with background information about the use of current facilities and the need for capital expenditures in the future. A final report will be completed prior to the 1984 legislative session.

The Commission on Postsecondary Education serves as a consumer protection agency for postsecondary education services in Alaska.
